Program H.F. US software revision 20.133 is a customer-oriented revision to upgrade serial communication link performances against known noise susceptibility of 20.033.

Also included in 20.133 is the knowledge of IPA error (external safety bridge on GTB445 GTB450) added to error codification “Alarm 190”

Static alarm such as Door Safety, Tube heat switch safety, External Safety are auto-reentrant while reset the alarm condition.

Finally 20.133 intensify the way and frequency to read the fluoro/radio command against software configuration in order to solve the “Intermittently CINE do not start” problem.

Upgrading to 20.133 it is suggested upgrade also Safety Supervisor to SSX01.010

Any question on the customer oriented upgrade 20.133 have to be addressed to sganzetti@odelxray.eu
