According to last test made it seems the coupling of 4N25 on MPU to TLP759 on CCB with ne optocoupler batches need more current to switch on the TLP759.

Actually in factory 4N25 are selected here in factory and replaced if they have the same error.

On the field changing an integrated circuit is not so easy, so we suggest what to do in case you have a CCB which is giving this error when cold.

Please consider this modification:
ON MPU BOARD
R60 from 1k Ohm to 470 Ohm
R91 from 1k Ohm to 470 Ohm
ON CCB board
R10 from 470 Ohm to 330 Ohm

R306 from 470 Ohm to 330 Ohm
